

Market Data & Comparables Snapshot

لقطة بيانات السوق والشركات المماثلة

Subject: Jahez International (TADAWUL: 6017) — valuation inputs

Compiled: 12 July 2026

Comparables: Talabat, Deliveroo, DoorDash, Delivery Hero

Every figure below carries an inline source name, URL and as-of date. Where a number could not be independently verified from a public source within the research window, it is marked "n/a — not sourced" rather than estimated — do not fill these in from memory or interpolation.

A. Jahez Market Snapshot

SHARE PRICE SAR 12.79 stockanalysis.com, 10 Jul 2026 close	MARKET CAP SAR 2.60bn stockanalysis.com, 10 Jul 2026	SHARES OUTSTANDING 203.26m stockanalysis.com, 10 Jul 2026	TRAILING P/E 92.76x stockanalysis.com, 10 Jul 2026
Metric	Value	Source	Date
12-month share price change	-52.87%	stockanalysis.com/quote/tadawul/6017	10 Jul 2026
Reported beta (5Y, thinly-traded — treat with caution)	0.02	stockanalysis.com/quote/tadawul/6017	10 Jul 2026
Cross-check: share price	SAR 12.86	argaam.com/en/tadawul/tasi/jahez	~28 Jun 2026
Cross-check: market cap	SAR 2,698.5m	argaam.com/en/tadawul/tasi/jahez	~28 Jun 2026
Cross-check: shares outstanding	217.38m	argaam.com/en/tadawul/tasi/jahez	~28 Jun 2026
Analyst avg. 12-month price target	SAR 17.12 (+33.9%)	simplywall.st/stock/sase/6017 (avg. of 10 analysts)	accessed 12 Jul 2026

Share-count and market-cap figures differ modestly between stockanalysis.com (203.26m shares) and Argaam (217.38m shares) — likely a free-float vs. total-issued-shares distinction or a snapshot-date gap of ~2 weeks; reconcile against the Tadawul-filed share register before using in a live model. Trailing P/E of 92.76x is distorted by depressed trailing-twelve-month earnings (see Q1 2026 net loss, Industry & News Pack §3) — not representative of a normalized multiple.

B. WACC Inputs

Input	Value	Source	Date
Risk-free rate proxy — Sah Sukuk (govt savings product) return	4.60%	arabnews.com/node/2646258 — Arab News, "Saudi Arabia opens June 'Sah' sukuk issuance"	7 Jun 2026 issuance
NDMC June 2026 SAR sukuk program — 10-year tranche (2036 maturity)	SAR 1.645bn size; <i>yield n/a — not sourced</i>	ndmc.gov.sa — NDMC official release	23 Jun 2026
Saudi Arabia mature-market equity risk premium (total ERP)	5.01%	pages.stern.nyu.edu/~adamodar — Damodaran country risk premium dataset	updated 5 Jan 2026
Saudi Arabia country risk premium	0.78%	pages.stern.nyu.edu/~adamodar — Damodaran country risk premium dataset	updated 5 Jan 2026

(component of the above)			
Comparable-company levered beta — DoorDash (DASH)	1.78 (5Y)	stockanalysis.com/stocks/dash/statistics	12 Jul 2026
Comparable-company levered beta — Delivery Hero (DHER)	1.86 (5Y)	stockanalysis.com/quote/etr/DHER/statistics	12 Jul 2026
Comparable-company levered beta — Talabat (TALABAT)	<i>n/a — insufficient trading history</i>	stockanalysis.com/quote/dfm/TALABAT/statistics (IPO'd Dec 2024, page reports beta n/a)	12 Jul 2026
Cost of debt — Jahez-specific	<i>n/a — not sourced</i>	No rated Jahez public debt identified. Cbonds publishes a "Saudi Arabia Corporate IG USD T-spread Index" but the live spread value sits behind a paid feed and was not accessible in this research window.	attempted 12 Jul 2026
Saudi sovereign USD bond spread over UST (context only, not a WACC input)	~50–100 bps	S&P Global Ratings commentary, via WebSearch synthesis — verify against a primary S&P note before board use	accessed 12 Jul 2026

Beta note: Jahez's own reported 5Y beta (0.02, see §A) is not usable for a bottom-up WACC — a beta that low on a stock that fell 53% in a year is a data artifact of thin trading, not a real volatility read. The standard fix is a bottom-up beta built from unlevered comparable-company betas re-levered to Jahez's capital structure; that requires each comp's debt/equity and marginal tax rate, which were not cleanly available from free sources in this pass — flagged as a modeling next step rather than estimated here. Talabat is the closest single-market GCC delivery comp but lacks enough trading history for a reliable beta.

C. Trading Comparables

EV/GMV is marked n/a across the board — none of the free sources below reliably expose EV alongside a matched-period, matched-currency GMV figure; computing it would require estimation this pack is designed to avoid (AGENTS.md rule 5).

Company	Listing	EV/Revenue	EV/EBITDA	P/E (TTM)	EV/GMV	Source	Date
Talabat Holding	DFM: TALABAT	1.88x	12.90x	16.70x	n/a	stockanalysis.com	12 Jul 2026
Deliveroo plc	<i>Delisted — acquired by DoorDash 2 Oct 2025 for 180p/share cash (~£2.8bn equity value; \$3,724m acquisition-date fair value). No longer a standalone public comp.</i>						
DoorDash, Inc.	NASDAQ: DASH	5.53x	60.25x	91.43x	n/a	stockanalysis.com	12 Jul 2026
Delivery Hero SE	ETR: DHER	0.97x	30.16x	n/a (loss-making)	n/a	stockanalysis.com	12 Jul 2026

Supplementary — forward multiples & source notes			
Talabat forward P/E	23.22x	stockanalysis.com	12 Jul 2026
DoorDash forward P/E	34.46x	stockanalysis.com	12 Jul 2026
Delivery Hero forward P/E	158.12x	stockanalysis.com	12 Jul 2026
Deliveroo acquisition terms (for context, not a live multiple)	180p/share; ~£2.8bn equity value	DoorDash SEC 8-K / 10-K disclosures	deal closed 2 Oct 2025

Swiggy / Eternal (India) were considered but excluded — no cleanly sourced, matched-methodology EV/Revenue and EV/EBITDA pair was found for both in this research window; a single unverified secondary-source figure (Eternal ~2.4x NTM EV/Revenue, ~66x NTM EV/EBITDA) surfaced but is not included in the primary table above pending direct verification.

D. Football-Field Note

The comp set shows wide dispersion — EV/Revenue from 0.97x (Delivery Hero, EU-listed, thinner margins) to 5.53x (DoorDash, US-listed, scale premium), and EV/EBITDA from 12.9x (Talabat) to 60.25x (DoorDash) — which largely tracks each platform's profitability profile rather than a single "delivery sector" multiple. Talabat is the most structurally comparable name (single-region GCC food-delivery platform, DFM-listed, broadly comparable margin profile) and should carry the most weight of the four in any comps-based cross-check; DoorDash and Delivery Hero are useful range markers but trade on different growth and scale assumptions than a KSA-only platform. Jahez itself currently trades at SAR 2.60bn market cap (\$A) against a depressed trailing earnings base (Q1 2026 net loss, Industry & News Pack §3), so a trailing P/E read is not meaningful today. Given the incomplete beta/cost-of-debt inputs in §B, this comps table should be treated as a sense-check on a primary DCF, not a standalone valuation — flag to IC that neither approach alone resolves a tight range, and that the WACC build needs the outstanding items in §B closed out before the DCF is final.
